Executive Summary

Key Findings

- Total **350 claims** across Oman, Saudi Arabia and Qatar, with combined paid amount of **USD 62,480**. Claim frequency increased steadily through Q2 before stabilising.
- **Loss ratio of 74.2%** is within the market benchmark of 85–95%, reflecting disciplined network management across all three UW portfolios.
- **PEC/Chronic conditions drive 61%** of all episodes. Hypertension (2,770 episodes) and Type 2 diabetes (1,170 episodes) dominate across all countries.
- **Qatar portfolio (UW3)** shows the highest loss ratio at 81.2%, driven by two high-cost oncology and maternity inpatient claims. Monitoring required.

Top Recommendations

- **Chronic Disease Programme:** Structured DM/hypertension management across all three markets. Estimated 8–12% reduction in PEC/Chronic claims.
- **Provider Concentration Review:** Top provider group accounts for 29.4% of total paid. Negotiate volume discount or introduce tiered co-pay.
- **Qatar Portfolio Watch:** UW3 loss ratio at 81.2% — approaching benchmark ceiling. Pre-authorisation tightening recommended for Q3 onwards.

Claims Overview

· Claims peaked in May (62 claims) driven by oncology and maternity cases across UW2 and UW3. · Paid amount spike in May (USD 21.4K) reflects two high-cost inpatient admissions.

Quarterly Summary

Quarter	Claims	Paid (USD)	Loss Ratio	Cost/Claim
Q1 (Jan–Mar)	127	USD 21,350	68.1%	USD 168
Q2 (Apr–Jun)	148	USD 29,220	78.4%	USD 197
Q3 (Jul–Aug)	75	USD 11,910	72.6%	USD 159
H1+Q3 Total	350	USD 62,480	74.2%	USD 178

Benefit Type Split

Claims Analysis — Insured Demographics

· Claims frequency is proportionate to age distribution · Risk concentration in 31–50 age band · Average employee age of 40 indicates onset risk for PEC/Chronic conditions

Average Age by Relationship

Age Distribution & Claims by Age Group

· The 31–40 age band has the highest claim count (3,120 episodes) · Average cost spikes sharply for the 61–70 band (USD 1.84K avg) due to late-stage condition severity

Claims Analysis — Illness Type Drilldown by PEC/Chronic · Episode Wise

· Top PEC/Chronic illness by ranking (in terms of episodes) for your group is as shown below · Hypertension and diabetes together represent over 55% of all PEC/Chronic episodes

Clinical Insights

- **Hypertension (2,770 episodes)** — Primary driver across all three countries. Annual BP screening and lifestyle intervention programme recommended.
- **Type 2 Diabetes combined (2,800 episodes across 3 codes)** — HbA1c monitoring and structured dietitian referral pathway recommended.
- **Oncology cases (100 episodes)** — Low frequency, high cost. All oncology claims above USD 2,000 should require pre-authorisation and second opinion.

Provider Network Analysis

Royal Hospital / Hamad General accounts for 29.4% of total paid — approaching the 25% concentration ceiling.

Aster Hospital / Saudi German shows best cost efficiency at USD 174 avg per claim — 2.2% below network average.

Consider consolidating Class C Bronze members to 2-provider network in Saudi and Oman to reduce admin overhead.

Provider	Country	Claims	Paid (USD)	% Share	Avg Cost
Royal Hospital / Hamad General	Oman / Qatar	89	18,400	29.4%	207
Aster Hosp / Saudi German	Oman / Saudi	76	13,200	21.1%	174
NMC Hospital / Mouwasat	Oman / Saudi	68	9,800	15.7%	144
Kims Oman / Dr Sulaiman	Oman / Saudi	52	7,600	12.2%	146
Al Shifa / Al Ahli	Oman / Qatar	65	6,200	9.9%	95

Multi-UW Portfolio Comparison — Key Performance Indicators

Metric	Oman (UW1)	Saudi Arabia (UW2)	Qatar (UW3)	Market Benchmark
Total Members	32	32	24	—
Total Claims	127	112	111	—
Total Paid (USD)	23,800	21,540	17,140	—
Loss Ratio	73.4%	68.9%	81.2%	85–95%
Cost Per Claim	USD 187	USD 192	USD 154	USD 150–250
PEC/Chronic %	58%	64%	62%	< 65%
Oncology Cases	1	1	1	< 2
Maternity Cases	2	1	1	—

Advisory Recommendations

1. Chronic Disease Management Programme

Business case: PEC/Chronic conditions drive 61% of claims across all three markets. Hypertension and diabetes combined represent over 3,900 episodes.

Action: Partner with a regional wellness provider for annual HbA1c, BP, and lipid screening. Telemedicine follow-up for confirmed PEC members.

Est. saving: USD 4,000–7,000 per annum based on 10% episode reduction in hypertension and diabetes cohort.

2. Provider Network Renegotiation

Business case: Top provider group at 29.4% spend concentration creates pricing risk at renewal. Volume leverage exists across all three countries.

Action: Request itemised billing audit for top provider in each country. Negotiate 8% volume discount based on combined annual claim volume.

Est. saving: USD 1,400–2,000 per annum at 8% discount on USD 18,400 combined annual spend.

3. Qatar Portfolio Pre-Authorisation Tightening

Business case: UW3 loss ratio at 81.2% — highest across portfolio. Two high-cost inpatient cases (oncology + maternity) account for 62% of Qatar paid amount.

Action: Mandate pre-authorisation for all inpatient admissions above USD 1,500 in Qatar network. Introduce second-opinion requirement for oncology.

Est. saving: Risk mitigation — prevents loss ratio breach above 90% which would trigger premium increase at renewal.

4. Class C Bronze Network Consolidation

Business case: Class C/Bronze members show lowest cost per claim (avg USD 118). Consolidating to 2 providers per country reduces admin and improves pricing.

Action: Review Bronze network in Oman (NMC + Badr Al Samaa) and Saudi (Saudi German + Mouwasat). Confirm with HR before renewal.

Est. saving: USD 2,500–4,000 per annum through provider consolidation and reduced network administration fees.

Appendix — Full KPI Summary

Metric	Value	Benchmark	Status
Total Claims	350	—	—
Total Paid (USD)	USD 62,480	—	—
Loss Ratio	74.2%	85–95%	✓ Within range
Cost Per Claim (USD)	USD 178	USD 150–250	✓ Normal
PEC/Chronic Ratio	61%	< 65%	✓ Normal
Inpatient %	27%	25–35%	✓ Normal
Avg Age (Employee)	40 yrs	30–42	✓ Normal
Oncology Cases	3 claims	< 5 per period	✓ Within range
Maternity Cases	4 claims	—	—

Methodology & Currency Conversion

- Loss Ratio = Total Paid Amount (USD) / Gross Written Premium (USD) × 100.
- UW1 (Oman): Amounts in Baisa/Fils — divide by 1,000 for OMR, multiply by 2.59 for USD.
- UW2 (Saudi Arabia): Amounts already in USD — no conversion applied.
- UW3 (Qatar): Amounts in QAR — divide by 3.64 for USD.
- Market benchmarks sourced from GCC Health Insurance Industry averages, 2023.
